Format

CALL ONKEY(string,key-unit,return-variable,
status-variable) GOTO line-number[,...]

CALL ONKEY(string-variable,key-unit,
return-variable,status-variable)
GOTO line-number[,...]

Description

ONKEY compares a string or string-variable characters one at a time to the key return-variable until a match is found. The string length may be longer then the number of GOTO line-number list. But a error results if that key is pressed as no line-number corresponds with the position of the key. If the string length is less than the number of GOTO line-numbers then the extra GOTO line-numbers are not used. The position of the characters in the string correspond to the GOTO line-number in the list. i.e. string "12345" GOTO 1,2,3,4,5 in the example:

CALL ONKEY("12345",0,K,S) GOTO 10,20,30,40,50 The key pressed like say 3 means line 30 will be used.

## Another example:

10 CALL ONKEY("Test",0,K,S) GOTO 22,29,34,41 :: GOTO 10

If T is pressed then 22 is used.

If e is pressed then 29 is used.

If s is pressed then 34 is used.

If t is pressed then 41 is used.

If no key pressed GOTO 10 to repeat line.
