Format   CALL VERSION(numeric-variable)

Description

See EXTENDED BASIC MANUAL PAGE 190 for more data.
Also see Programs below.

```
This line will ask for version| >CALL VERSION(X)
and return current to numeric-|
variable X.                   |
                              |
Line 100 asks for version num.| >100 CALL VERSION(V)
Line 110 checks for version   | >110 IF V<2016 THEN INPUT "DSK
to be larger than 2001 and if |  NAME":D$ :: INPUT "FILENAME"
it is will ask for input to   |  :F$ :: CALL XB("DSK."&D$&F$)
use a old routine CALL XB. |
                              |
```

Options
Will always return current version of RXB. As you can see RXB
actually makes VERSION a valuable routine again.
