

Format CALL VCHAR(row,column,character-code)

CALL VCHAR(row,column,character-code,
repetition[,...])

Description

See EXTENDED BASIC MANUAL page 188 for more data. The only syntax change to VCHAR is the auto-repeat function. Notice the new auto-repeat must have the repetitions used or it gets row confused with repetitions. Also RXB HCHAR is now in ROM.

Programs

This line puts character 38 at row 1 column 1 for 99 times, then puts character code 87 at row 9 column 1	>100 CALL VCHAR(1,1,38,99,9,1 ,87)
--	---------------------------------------

Fills screen with characters.	>100 CALL VCHAR(1,1,32,768,1, 1,65,768,1,1,97,768,1,1,30, 768) :: GOTO 100
-------------------------------	--

Options

CALL VCHAR is now written in Assembly so much faster is faster than normal XB, also as separate line numbers are needed to continue placing characters on screen.

See HCHAR, HPUT, VPUT, HGET and VGET.
